

Bunraku Networked Animation Software Architecture

Complete live path: motion capture - network transport - live coding - VMC rendering

Bunraku Frame protocol v1

One OSC message per complete animation frame

/bunraku/vmc/frame

avatar + source + frame ID + timestamp + 21 bone transforms

Each transform: x, y, z, qx, qy, qz, qw

Architecture boundary

VMC at capture and rendering endpoints

Bunraku Frame across network and live-coding stages

BuMoChi operates inside SuperCollider; it is not a network relay

Distinct UDP ports prevent listener conflicts on one Mac
